Power System**

Made In The UK

OpeNice is the evolution of over 15 years of British manufacturing excellence from WM Shutters. Produced in the UK and working closely with our partner company Nice, who are world leaders in motor and control design. OpeNice is a garage door which solves all the shortfalls of current door roller designs on offer.

Every door is tailor made in our Shropshire manufacturing premises to suit your home, with every OpeNice Door carrying a unique serial number allowing life long traceability and manufacturers support, giving you piece of mind.

**Support UK
Manufacturing**

Quality Assured

Every OpeNice door undergoes rigorous quality checks during manufacture, ensuring that when the product is installed it is to exact specifications of ISO 9002 quality accreditation, with all components utilised being produced to strict specifications layed down for the OpeNice product. Openice is designed and built to conform to BS 13524

Long Term Piece Of Mind

OpeNice has a safe operation 10 year warranty on all mechanical door components, with a five year warranty on motor drives and controls.

OpeNice Extra Service

This is a support package with an extended service contract having a bi-annual door check up with all required works, including transmitter battery change and safety upgrades.

(A yearly service contract is required to Qualify for the Extra Service.)

OpeNice Overview

OpeNice is constructed from UK manufactured aluminium twin walled insulated profiles available in 14 colours.

- Profile endcaps keep the door curtain running smooth and true.
- Continuous curtain mounted webbing ensuring added strength.
- Reinforced bottom section with integrated base seal.
- Aluminium full box covering the rolling mechanism.
- Extruded aluminium locking system unique to OpeNice.
- OpenDrive Control system with two multichannel keyfobs in a choice of 6 colours.

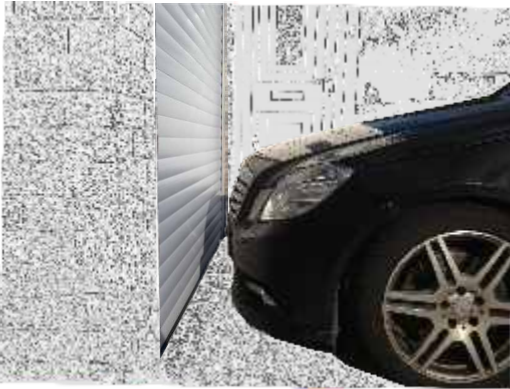

OpenDrive Control

OpeNice is the first Insulated roller garage door to have an eco friendly low voltage integrated motor drive and control unit powered by 24V DC supply, which offers many outstanding benefits.

- The new generation Nice OpenDrive control system has full programming and control diagnostics
- Opening and closing speed adjustment.
- Soft stop door movements.
- Emergency powered over-ride system.
- Low energy courtesy light
- Solar panel integration for stand alone applications.
- Low power consumption and sleep mode.
- GPS "dial to open" capabilities.

Maximise Your Garage

The vertical operation allows you to park right up to the door making full use of your driveway. Integrated side tracks eliminate the need for a wooden door frame giving a wider drive through size. The full mechanism concealed inside the aluminium head cover, without imposing tracks and spring systems protruding into your garage allowing the roof space to be used for storage.

Space Saving Design

Only Available On 300 range

Improved Security

No more looking for keys on wet dark nights or worrying if you locked the garage door when you are away, the OpeNice is controlled by a remote keyfob and locks automatically when closed, creating a secure barrier between your possessions and would-be intruders. OpeNice locking system is a unique design which is fully manufactured from high grade aluminium parts and unlike many other locks contains no weak plastic components. The lock has integrated soft pads used in conjunction with foam edged collection rings which keep the door curtain concentric during operation.

Adjustable Motor Drive Technology

The Open drive motor unit is a development of many years of experience in the UK garage door industry combined with one of the worlds largest control manufactures. Motor drives are ultra compact in size with unique features of flexible torque and speed adjustment, so that every garage door no matter what the size can be driven by the same motor unit. The Open drive features a slow start and stop system reducing stress on all door components. The open and close positions are set electronically with exacting precision and does not rely on mechanical parts that can wear over time.

Powered Emergency Release

OpenDrive control system has a host of innovative features as standard. The unit has been designed to be as power efficient as possible, with a 24v DC control system giving added stability due to the reduced amount of moving parts required for traditional 240v units.

OpenDrive has a built in emergency power unit which powers the OpeNice garage door for up to seven days or 50 operations. This is achieved by the control going into a sleep mode when mains power is not available conserving the battery life. When the unit is in emergency battery mode the door will travel at half speed and the courtesy light will flash as an indication of mains power failure.

Traditional battery back-up units are inferior as they have to turn 24v power into 240v, an unnecessary task on the OpeNice as the entire system is 24V low voltage power saving system as standard.

LED energy saving courtesy light system is integrated into the wall mounted unit illuminating the garage for a set time period after opening and closing.

Support UK Manufacturing

OpeNice insulated garage door sections are manufactured using state of the art machinery unique to the UK. OpeNice profile is environmentally efficient due to the unique through section insulation value of 1.37W/m K.

The aluminium is pre-coloured ensuring colour consistency with an additional anti-scratch film applied, giving a fully protected harder wearing finish.

OpeNice 200 OpeNice 300

OpeNice is available in two size options, the 300 range is the standard profile used, with the smaller 200 series being available for applications where headroom and side room are at a premium, your local dealer will advise on the OpeNice to suit your application.

OpeNice human interface keyfobs are designed to look fantastic as well as being ultra practical.

With state of the art rolling code high security coding you can rest assured that the security of your home is in safe hands.

The ergonomic keyfob comes in a choice of one, two, four and nine button formats ensuring all options of integration are taken care of.

The keyfobs have a solid tapered rear casing in a white hard wearing enamel finish with smooth rounded corners and an access port for a connection strap.

The operation buttons have a positive action so rogue operations from inside a pocket will be ignored.

The twin buttons are programmable to carry out different operations as required.

Rear Of The OpeNice Keyfob

OpeNice Keyfobs are available in six fantastic colours, to let you express your individuality.

Mix and match the colours of the Keyfobs to suit your personality, or just have standard black, the choice is yours!!!.

see the keyfob presentation at www.openice.co.uk

You Decide

Wall mountable Large keyfobs

Additional control options are also available to tailor OpeNice to your requirements allowing the garage door to be used as a secure access point to your home.

The control accessories below are fully wireless allowing them to be positioned without obtrusive cables or trunking.

Wireless digital keypad

With a smooth oval design in gunmetal finish with stainless steel keypad and black backdrop. The unit illuminates when in use with a blue backlight.

The code can be modified without fuss allowing security to be modified whenever you decide.

Wireless key access point

With a fixed standard security key preference is yours if you want to add a conventional key entry system. The unit also illuminates when activated and comes complete with three keys as standard.

Available Optional Extras

Solar Solutions For Unpowered Garages

With the integration of a solar panel the OpeNice Garage Door can be powered by the sun. Installed to any garage without the need for expensive digging and cabling to mains power. The Solar panel collects energy even on a cloudy day charging the battery pack allowing the OpeNice low voltage drive and control system to be power operated whatever the location. Multiple garages can have a single larger solar panel solution.

Remote Operation By Mobile Telephone

Remote control operation is a standard feature with OpeNice, but what if you are not at home to operate your garage door for access for deliveries, friends, family etc or you have multiple occupants sharing one main underground garage.

The OpeNice has the facility to have a GSM Unit installed into the wall mounted panel allowing "Dial 2 Open" to be enabled. Once the OpeNice has been programmed with your phone numbers you can simply dial the unit and the door will open. The Auto close feature will be enabled ensuring the door is closed after a pre determined period which is programmed to suit your requirements.

The GSM unit also allows a building manager to log in when required to update any parameters of the system and monitor all door actions and settings. The GPS System has a twin level password system allowing users to see as many or as fewer functions as required and the system manager to see all parameters when required.

Remote maintenance can also be carried out using the GPS interface.

You Can't Resist An Attractive Upgrade

INTI2B

INTI2R

INTI2G

OX2

When your new OpeNice garage Door is installed you may want to integrate a secondary existing garage door, gate system or in fact any home automation products. Simply install the receiver upgrade and all the OpeNice features multi function buttons can be utilised to control the new, as well as the existing.

Window Options

OpeNice can have vision segments included as part of the door build. A minimum of two segments up to a maximum of six can be installed. The windows can be plain or frosted, and can also be colour tinted to suit the door colour of your choice.

OpeNice
Approved Agent

OpeNice products come with a manufacturer five year warranty on all components, subject to correct installation & servicing. We recommend an Bi-Annual service agreement to ensure that you OpeNice is operating at its optimum performance. A service contract extends the manufacture warranty to ten years.

WM Shutters Ltd as a progressive company reserve the right to update or modify all products without prior consultation. All colour samples depicted in this brochure are as close to the original manufacture colour as possible, garage doors supplied may vary in colour from the brochure representation.
